

THE KINDERGARTEN.

THE little folks will not be neglected by the managers of the Cincinnati Centennial Association. The Educational Department will be a Kindergarten, in charge of Miss Louise M. Taff, Mrs. Edna Warden and Mr. C. Nippert. Every member of this committee have had experience in this line, and their department will be one of the most interesting of the entire display.

The home of this feature of the Exposition will be in the roomy and picturesque tower of the main exhibition hall in Washington Park, just north of the Elm street entrance, and the exhibits will be the work done in the different kindergartens of the Northwest, with material for kindergarten work in different forms, together with furniture and appliances for this sort of educational work. The main point of attraction will be the school in working order—about fifty little ones, ranging in age from four to six years, under the supervision of a skilled teacher. Beside reciting their lessons and performing tasks based on their knowledge of forms and colors, they will engage in games of pastime, accompanied by songs, in the presence of the visitors who will be attracted to this novel display. It is safe to say that no parent will consider that they have "done" the Centennial show unless they have passed a few interesting and delightful moments in the presence of the future mothers and fathers of the Republic.

HOUSE OF REFUGE.

A Brief Description of the Premises—A Delightful Drive.

Of the public institutions of the city none are more attractive or interesting than the Cincinnati House of Refuge, situated in the Twenty-fourth ward.

about five miles from the United States custom house and postoffice, in a north-westerly direction, on Colerain avenue.

This institution was chartered in 1845 and opened for the reception of inmates in 1850. It is maintained by the city and the average number of inmates is over three hundred. As a "refuge" for the homeless and unfortunate, and a reformatory for delinquent and incorrigible youth, it is conceded to be one of the foremost and most successful in the country, fully realizing the expectation of its promoters and founders.

The buildings stand back from the avenue about nine hundred feet, are large, commodious and substantial, and will accommodate four hundred inmates and the requisite corps of officers. The main building is a castellated structure of rough blue limestone with trimmings of white Dayton stone, has a frontage of two hundred and seventy-seven feet, is five stories in height, with towers at the extremities six stories high, including the basement. To the rear of the main buildings are the school buildings, chapel, work-shops, play-grounds, etc., etc.

A beautiful lawn of five acres extends from the main building to the avenue in front. Colerain avenue has recently been paved with granite blocks, and is now one of the most delightful drives in the city. Street cars pass every five minutes. Visitors to Cincinnati during the Centennial Exposition of the Ohio Valley the coming summer should by all means avail themselves of the opportunity of visiting the Cincinnati House of Refuge. The doors are open to all visitors, no passes being required.

CINCINNATI CENTENNIAL NOTES.

It is the best advertised show on earth. The "Fairy Fountain" will catch everybody.

Cincinnati's are hustling now to get space for exhibits.

The congratulatory lunch at the Gibson House, after the dedication, was an enjoyable affair.

The Press Club will be the most perfect of its kind ever seen in a place of this character.

"Uncle Sam" intends to make a display himself, and will spend \$227,000 to do it.

There are but fifteen regular Commissioners on the Board, but each one is worth a dozen of the ordinary kind.

The Centennial postoffice box holds on an average of 1,500 letters and papers received from all parts of the United States.

The restaurant will be one of the greatest privileges of the Centennial. It will be located in the north wing of the Washington Park building, where the great bridge across Elm street, and directly on the line of March of the crowding thousands from Music Hall to the main building.

The "Bureau of Information" will be a great help to the stranger within the gates. It will put you in possession of facts that would take you a year to hunt up unaided, and will save you many a good dollar. This Centennial is not a money-grubbing scheme. It is to give you the worth of what you spend and to aid you in seeing and getting just what you want for the least possible outlay of time and money.

HUSTLING OUT OF SED.

How the Fire Ladders of Cincinnati Turn Out.

The Cincinnati Fire Department is seventy years old. In that time it has kept abreast of the latest developments, and now, in the year 1888, there is no organization of the kind in the world that excels it in equipment or the bravery and activity of its members. The first steam engine ever used in any fire department in the world was introduced into that of Cincinnati in 1853 by Mr. Latzer, the inventor, a Cincinnati man, and the senior member of a firm of engine builders in that place. The department to-day embraces twenty-five steam engines, seven hook and ladder trucks and thirty-one vehicles.

Many years ago, when such well known

citizens as C. H. Thomas, Jerry Kierstedt, John E. Bell and Miles Greenwood were in their young manhood, the volunteer fire department was in its glory, and a big conflagration was sure to be the signal for a free fight among the boys. Many abuses crept into the system, when finally Mr. Greenwood and others labored incessantly to make a paid department out of it. Of course they met with vigorous and determined opposition, but the old method was at last supplanted, and to-day the wonder is how an organization of the kind could have been so long maintained in the go-as-you-please style that characterized the earlier times.

Among the many labor and time saving devices that have from time to time crept into the service, much to its improvement, so far as efficiency goes, none shows better results than the one that enables the boys to "get their" in the least possible

time. In addition to everything of the best kind that enables the department to start forth with the many conflagrations that occur in the city, a peculiar device has been adopted to get the men out early. The sleeping apartments of the firemen are on the second floor of the different houses.

The manner in which the men are awakened is as novel as it is efficient. The cots on which they sleep are placed in a circle, and from the inner end of each cot cord runs over a pulley in the center, one end of which is fastened to the bed clothes and the other to a weight attached to a pulley. The electric shock which sounds the fire alarm displaces this weight and it drops, and the cord snatches the clothes from the forms of the sleeping fire-fighters, who jump and run for the trap doors with the speed of a scared deer.

In the incredible short space of one minute or less from the time the great gong on the tower at Sixth and Vine gives the alarm, the entire department can be rushing like the wind to the seat of danger.

This speed means the saving of millions of dollars, as speed is everything in cases of this kind.

The present chief of the Cincinnati department is Mr. Lew Wisby, a veteran of forty years' service. He is the worthy successor of "Honest" Joe Bunker, who lost his life in a collision while going to a fire, and within a few feet of the headquarters of the department, in which he had been on duty for thirty years.

CENTENNIAL NOTES.

HERE will be a "fairy fountain" in the Main Hall that will "catch" everybody. The basin is fifty feet in diameter immediately beneath the dome. The water will rest on thick glass, and beneath this will be placed strong electric lights that will be reflected on movable glass of various colors, thus giving the water any hue desired. This beautiful conceit was first used at the Jubilee exhibition at Manchester, England, last year, and produced a sensation. It has never been reproduced, and will be entirely new in this country.

The Buckeye, Atlas, Greenwald and Lane & Bailey engines have already been located, and in a few days workmen can begin on the foundations. The two former will be used in the electric lighting department, and the two latter in Machinery Hall. The Galloway boilers that will drive the electric light have also been located, and the drawings are being rapidly prepared.

Country editors must not fail to visit the Press Club headquarters. They are all honorary members by virtue of their calling, and will be warmly welcomed by the local journalists and the Exposition commissioners.

There is no doubt now about a government exhibit. Two hundred and twenty-seven thousand dollars will be expended in transferring the treasures from the capital.

The children will not be forgotten. They will have an entire room to themselves for exhibits that cannot fail to impress the juvenile mind.

The structure which spans Elm street, connecting the Washington Park buildings with Music Hall, will be called the "Bridges of Sighs."

The canal bridges in Machinery Hall will be transformed into beautiful shapes, in keeping with the Venetian idea of architecture.

It is a settled fact that President Cleveland and his beautiful wife will attend the opening on July 4.

MRS. FANNIE HUFFORD & KIENTLE, Fashionable Milliners. Main St., Opp. Opera House.

Newest Goods and Latest Styles. In Ladies' Misses' and Children's Hats and Bonnets.

—A LINE OF—

FINE RIBBONS, and TRIMMINGS.

Also all kinds of gowns, flosses, trines and embroidery material.
